

An underwater photograph showing a diver's legs and feet in a dark blue environment. The diver is wearing a black wetsuit with green accents. A large, dense cloud of bubbles rises from the diver's feet, filling the right side of the frame. The background is a deep, dark blue, suggesting a deep underwater setting.

Our visionary concept for the future?

BADU Eco Vision!

Efficient, sustainable and user-friendly.

BADU Eco Vision stands for the development of a new generation of high-efficiency motors that protect the environment and reduce the pool's operating costs.

Our mission includes the following key elements:

Innovative

The new generation of BADU EV motors are the result of innovative solutions and state-of-the-art technology. The motors combine maximum efficiency with durability and ease of maintenance.

**Sustainable
and safe**

With a clear focus on safety and sustainability, we reduce the energy consumption and minimise the ecological footprint of each pool. German safety standards ensure a reliable and safe operation.

Easy to use

The user-friendly design of BADU Eco Vision motors allows for easy handling and control. Thanks to an advanced, carefully coordinated pool system, the intuitive control saves time and reduces maintenance costs.

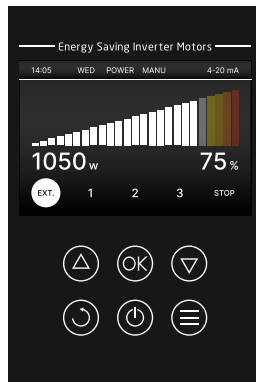

Efficient

The BADU Eco Vision motors achieve maximum motor performance with minimum energy consumption, which makes them an economical and environmentally friendly solution for the operation of any pool.

BADU® EV Motors at a Glance

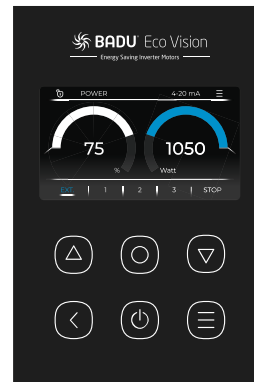

The BADU Eco Vision motors can be easily connected to external devices or integrated into existing pool systems thanks to various external control options. The software architecture that has been specially developed for both motors ensures easy operation as well as perfectly synchronised motor and control functions.

EV1

- Intuitive user design
- Housing of motor control made from plastic
- Pool systems without separate control technology
- Schedule / Timer / Filter programmes
- Connection of photovoltaic system

EV2

- TFT Full touchscreen display
- High-quality aluminium design
- Designed with control technology in mind
- Large display and control panel
- Silent motor fan

New generation of EV motors with various control options and full-colour TFT display.

BADU® EV Prime

Classic meets modern - the proven pump housing of BADU Prime meets BADU Eco Vision, the latest generation of motors.

Designed for pool systems without separate control technology, the BADU EV Prime has a motor that belongs to an innovative generation of motors with simple design and easy-to-use features. Various schedules, filter programmes, party mode and PV connection can be selected conveniently using the integrated colour display. Thanks to the wide range of control options and simple installation, the BADU EV Prime pump is the ideal energy-saving solution for any smart home.

BADU® EV Eco Future

Made of bio-based plastic. Made in Germany.
Combines innovation with design and maximum sustainability.

Sustainability „Made in Germany“: With the BADU EV Eco Future, SPECK Pumpen is launching the first pool circulation pump made of bio-based plastic and is setting new standards in terms of sustainability and climate protection.

Inspired by nature, the honeycomb structure combines weight advantages with robustness, enabling top technological performance with minimum energy consumption. Equipped with the latest generation of BADU Eco Vision motors and modern interfaces, it seamlessly integrates into any smart home system.

BADU[®]JET Turbo Light

Innovative technology combined with elegant design.
Perfect for leisure and relaxation swimmers.

If you're looking for endurance training, relaxation swimming, recovery training, aqua fitness or fun with your family in the pool - the BADU JET Turbo Light has it all - with a real open water feeling.

The powerful permanent magnet motor of our counter swim system creates an outstanding swimming experience combined with energy-efficient operation. Three individually adjustable performance settings; the perfect setting for any type of swimming style. The intuitive operation, electrical installation and commissioning make it particularly easy to use.

BADU

BADU[®] NetLink

Smart controller
for variable speed pumps.

Incorporate existing variable speed pumps into a smart home - BADU NetLink makes it possible. Remotely control already installed, variable speed pumps of the BADU Green range within a smart home system using a smartphone and Wi-Fi technology together with our fully automated pool controller. You can select automatic or manual operating modes, filter times and flexible switch times. In addition, a water level sensor (optionally available) can be connected. You can also share the smart controller with your friends and family.

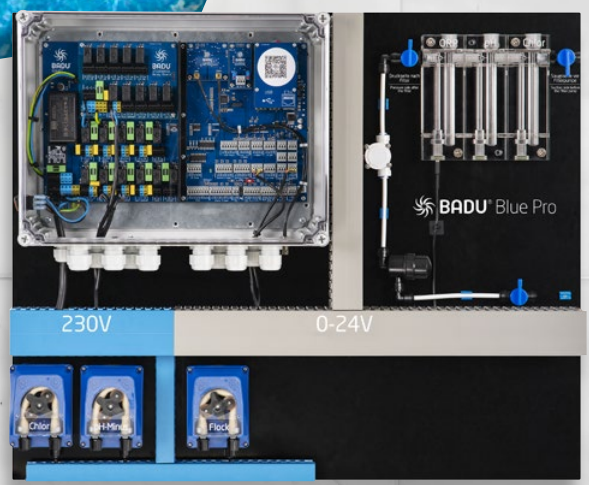

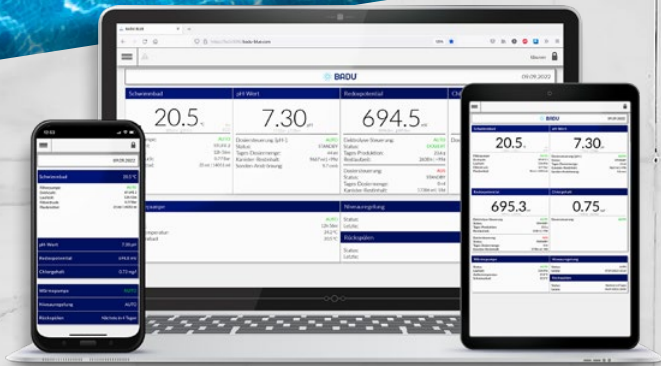

Experience a pool controller that is easy to use and focusses on the essentials, whether you are at home or travelling on the other side of the world. It provides remote control of your pool system, from anywhere at anytime. You can also incorporate existing variable speed pumps of the Eco range without any problem.

BADU[®] Blue

BADU[®] Blue Pro

The smart complete pool control system for carefree swimming fun. Designed for private pools, with integrated measuring and control technology.

You can manage your pool from anywhere at any time, whether you're enjoying a relaxing evening at your pool or travelling on the other side of the world. Let the all-in-one pool controller BADU Blue or BADU Blue Pro do the work. Both pool controllers are straightforward to use and monitor and control all the parameters of your pool. They enable efficient operation and offer control over numerous pool devices that can be optionally connected, such as lighting, PV systems, heating, water level control and much more. Experience smart pool control bliss at your fingertips - you just need one app to access both controllers and let them manage the daily tasks of water treatment. Smarten up your pool, for a simplified maintenance, for a carefree pool enjoyment.

BADU[®] FlowSonic BADU[®] FlowSonic+

Flow measurement via ultrasound.

Until now, variable speed pumps have had a major disadvantage: The measurement of the volume flow could never be exact or without loss. With the two flowmeters BADU FlowSonic and FlowSonic+, this is now a thing of the past. Thanks to ultrasonic measurement. Convenient control of both flow meter models through an app; communication with pool controller solutions is possible provided they can process either a digital signal (pulse signal) or an analog signal. The FlowSonic+ can be also used as a stand-alone solution, as it has its own power supply and an integrated display.
